

Technology cuts both ways

The Enzosystems Advanced scanner module is developed for two reasons: First to make the check-in process super-fast. Guest can use their identification document or a barcode to look up their reservation, saving check-in time. Second, to get the guest identification documentation in case it is required by local government. The guests are doing it themselves, no additional staff is needed. Serving both the guest and hotel making the Advanced scanner module cut both ways.

Integrated design

The design of the Advanced scanner module fits perfectly in your hotel solution. The top is made from hardened glass, silk printed on the bottom side. To ensure a good read in all light conditions, a hood is added to the passport scan area to block ambient light. Similar to the Hotelkiosk, it is fitted with notification LED's to let the guest know when interaction is needed.

Passport scanner

The passport scanner is used to inspect and image travel documents. It uses infrared, white visible and ultraviolet light to capture images of the presented document. It reads the text on the document using OCR technology. Biometric data can also be captured by RFID if required. The scanner can read both standard ICAO passports as well as credit card sized identification cards.

Barcode scanner

The barcode scanner reads and decodes all standard 1D and 2D codes. It can read these codes both from smart phone displays as well as paper in a split second. A barcode scanner is a vital piece of the hotel solution to ensure maximum check in speed. For more information about this, please contact Enzosystems.

Dimensions	230 x 400 x 250 (width x height x depth)
Weight	8 kg
Power	12V and 5V

Passport scanner specifications:

Supported documents: ICAO-compliant and non-compliant travel documents

Scanning method: Both Optical and RFID scanning

Barcode scanner specifications:

Decoding: All standard 1D and 2D barcodes including EAN and QR-Code

Media: Reads from smart phones and paper

The Advanced scanner module is an add-on to the Hotelkiosk DTK-3, it can not be used as a stand alone device
