

All in the guests' hand

The Enzosystems' online check-in web app allows guests to streamline their check-in process by filling out their details and finishing payments before arriving at the hotel. Fully integrated into your PMS and uses a web app that works on all devices with a web browser, no need for downloading apps. When arriving at the hotel, the only thing a guest needs to do is pick up the key.

Get your guests onboard

Besides speeding up the check-in process, there are more advantages: First, it is a perfect spot for upsells and upgrades; guests can take time to select extras they would like to add to their stay. Secondly, the look and feel are fully customisable to match your corporate identity increasing brand visibility.
