

Employee of the month, every month

A traditional hotel has a front desk staffed with at least two or three people to help the guest check-in or check-out. The desk is manned 24 hours, in three shifts, 365 days a year. A Hotelkiosk is both an immediate significant saving and a unique tool to make your guests happy! It handles the complete check-in and check-out process. And when integrated into your business process, it will be the most efficient and loyal employee you've ever had.

Let technology help you

The kiosk takes care of the complete check-in and check-out process. It can provide your guests a selection of rooms to choose from, it programs the room keys and handles the payment. It handles early check-ins, may sell extra's as breakfast or late-check-outs and allow your employees to help wherever they are needed and have more time to make the guests feel at home. The number of screens presented to the guest is as little as possible to speed up the process. Check-in can be handled within 30 seconds, checking-out can be done in around 15 seconds. The Hotelkiosk is built into the table to obtain a clean and accessible system that blends in to your lobby.

Seamless intergration

Because we do not believe in the success of standard out-of-the-box products for this type of kiosk implementations, we will deliver a customized solution that fully fits into your organization. We will use our base check-in/out software for this and will change the look-and-feel matching the corporate identity of your hotel. On the backside we will make sure the system talks to all your systems running in your hotel.

Go all-in

We have proven that kiosks really can be very successful if implemented the right way. Besides selecting the right kiosk hard- and software, the correct decision must be made how to integrate the kiosks in the hotel operations. Kiosks must be fully integrated in the check-in and check-out procedure of the hotel and should be placed at the right position in the lobby to give you optimal results. Putting some kiosks in a corner of the lobby simply does not work.

Dimensions 420 x 527 x 375 above table top, 650 total (width x depth x height)
 Material: Aluminium and hardened glass
 Weight 24 kg
 Power 24V - 35W max (external power adapter included)

Display: 17" industrial grade full color display with capacitive touch interface
