

CHECK-IN

**Anywhere, Anytime**

The Enzosystems GO Kiosk is our jack of all trades because it is an outdoor, wall-mounted kiosk that can securely handle payments, reads and prints barcodes, writes and dispenses RFID cards, and prints receipts. If necessary, it even can be fitted with a video call function using the built-in camera, speaker, and microphone.

It can be what you want it to be. For instance, it can be your night guard by dispensing room keys to only registered guests, keeping unwanted visitors outside. It can also be your super-fast check-in kiosk by reading online checked-in guests' QR-code.

And, if you want, it can take care of the complete check-in and check-out process. It can provide your guests with a selection of rooms to choose from, it programs the room keys and handles the payment. It handles early check-ins, may sell extra's as breakfast or late-check-outs and allow your employees to help wherever they are needed, and have more time to make the guests feel at home. The number of screens presented to the guest is as little as possible to speed up the process. Check-in can be handled within 30 seconds, check-out in around 15 seconds.

Personal assistance

With the video call function, you can extend your hospitality to outside the hotel walls. Guests that run into problems or have questions can use the GO-kiosk to personally talk to someone from the hotel.

Seamless intergration

For this type of kiosk implementations, we do not believe in standard out-of-the-box products because all situations are different. We will deliver a customized solution that completely fits into your organization. We will use our base check-in/out software for this and will change the look-and-feel matching the corporate identity of your hotel. On the back-end, we will make sure the system talks to all your systems running in your hotel.

Dimensions	750 x 425 x 100 protruding wall, 330 total (height x width x depth)
