

A front desk outside your hotel

The all-in-one solution for staffless hotels. A weather-resistant wall-mounted kiosk that can securely handle payments, read barcodes, encode key cards, and print receipts, right outside the hotel front door. Also feel free to install this kiosk in the entrance hall to provide more comfortable experience to your guests.

GO Kiosk can be what you want it to be. For instance, it can be your night guard by dispensing room keys to only registered guests, keeping unwanted visitors outside.

It can also be your super-fast check-in kiosk. It reads QR codes of guests who pre-checked-in online. With a simple user interface, checking-in can be handled in 30 seconds and checking-out in 15 seconds.

The kiosk allows hotels to accept walk-ins and provide their guests with a selection of rooms to choose from, with the capability to sell extras 24/7.

PMS integration

We support the most popular PMS platforms and add new ones regularly. Our team will make it work if a very specific or fully customised PMS solution is required.

Payment integration

It supports secure and cashless payment options from a variety of payment providers. All data exchange between the kiosk and back-office systems is secure/encrypted.

Door lock system integration

The most commonly used door lock systems are supported as standard. We continue adding new systems to our list, working with clients to adapt their specific needs.

Dimensions: 775 x 450 x 120/220mm, (height x width x depth outside/inside the wall)
Material: Aluminium, stainless steel and hardened glass
Weight: 45 kg
Power: 24V (external power adapter included)
