

Employee of the month, every month

A traditional hotel has a front desk staffed with at least two or three people to help the guest check-in or check-out. The desk is manned 24 hours, in three shifts, 365 days a year.

A Hotelkiosk is both an immediate significant saving and a unique tool to make your guests happy! It handles the complete check-in and check-out process. And when integrated into your business process, it will be the most efficient and loyal employee you've ever had.

Let technology help you

The kiosk takes care of the complete check-in and check-out process. It can provide your guests with a selection of rooms to choose from, it programs the room keys and handles the payment. It handles early check-ins, may sell extras as breakfast or late-check-outs, and allow your employees to help wherever they are needed and have more time to make the guests feel at home. The number of screens presented to the guest is as little as possible to speed up the process. Check-in can be handled within 30 seconds, checking-out can be done in around 15 seconds. The Hotelkiosk is built into the table to obtain a clean and accessible system that blends into your lobby.

- Display with touch interface
- Cardreader
- Notification LED
- Contactless cardreader
- Printer
- Payment device
- Room key encoder
- Notification LED

Seamless integration

Because we do not believe in the success of standard out-of-the-box products for this type of kiosk implementation, we will deliver a customized solution that fully fits into your organization. We will use our base check-in/out software for this and will change the look-and-feel matching the corporate identity of your hotel. On the backside, we will make sure the system talks to all your systems running in your hotel.

Go all-in

We have proven that kiosks really can be very successful if implemented the right way. Besides selecting the right kiosk hard- and software, the correct decision must be made how to integrate the kiosks into the hotel operations. Kiosks must be fully integrated with the check-in and check-out procedure of the hotel and should be placed in the right position in the lobby to give you optimal results. Putting some kiosks in a corner of the lobby simply does not work.

Dimensions:	420 x 527 x 375 above table top, 650 total (width x depth x height)
Material:	Aluminium and hardened glass
Weight:	24 kg
Power:	24V - 35W max (external power adapter included)

Display:	17" industrial grade full color display with capacitive touch interface
Printer:	80mm wide thermal printer to print room slips, receipts and cost overviews
Room key encoder:	RFID reader / writer supports multiple communication protocols
Payment systems:	Various secure payment devices possible, depends on payment acquirer

Hotel application:	We use our base version as a starting point and add your wishes to it
PMS interface:	Our flexible and expandable PMS interface can talk with numerous PMS systems
